

**ABSTRACT**

The present invention relates to the use of an  $\alpha,\omega$ -substituted oxyalkylenated silicone, in particular of formula (I) below:

in which:  $\text{R} = -(\text{CH}_2)_p\text{O}-(\text{C}_2\text{H}_4\text{O})_x(\text{C}_3\text{H}_6\text{O})_y\text{R}^1$

where: -  $\text{R}^1$  represents H,  $\text{CH}_3$  or  $\text{CH}_2\text{CH}_3$ ,

- p is an integer ranging from 1 to 5, x ranges from 1 to 100 and y ranges from 0 to 50,
- it being possible for the units  $(\text{C}_2\text{H}_4\text{O})$  and  $(\text{C}_3\text{H}_6\text{O})$  to be distributed randomly or in blocks,

- the radicals  $\text{R}^2$  represent a  $\text{C}_1$ - $\text{C}_3$  alkyl radical or a phenyl radical, and

-  $5 \leq m \leq 300$ ,

in a composition for cosmetic, pharmaceutical, dermatological or hygiene use, in order to limit, reduce and/or eliminate the transfer and/or migration of the said composition.

The invention also relates to a stable water-in-oil emulsion for cosmetic,

pharmaceutical, dermatological or hygiene use, comprising an aqueous phase and a

fatty phase comprising a silicone oil, characterized in that it comprises at least one  $\alpha,\omega$ -substituted oxyalkylenated silicone chosen from those defined above in combination with dyestuffs. The invention also relates to a composition comprising the above emulsion, and to its applications in the cosmetics, pharmaceutical, dermatological or hygiene fields.
